PROFESSIONAL SUMMARY

Results-driven Software Engineer with dual Master's degrees in Computer Science and Systems Technology, specializing in Palantir Foundry data engineering, cybersecurity, and cloud architecture. Certified Palantir Foundry & AIP Builder with proven expertise in ontology design, data integration, and building production-grade enterprise applications. Track record includes military-grade weather prediction systems, MSP workflow optimization, and comprehensive real estate management platforms. Expert in full-stack development, DevOps practices, and security implementation with hands-on experience in AWS, Docker, and modern development frameworks.

CORE TECHNICAL COMPETENCIES

Palantir Foundry & Data Engineering Foundry Ontology Design, Pipeline Builder, Code Repositories, Quiver, Workshop, Transforms, Functions, Object Types, Link Types, API Integration	Programming & Development Java, Python, C/C++, C#, JavaScript, TypeScript, Swift, React, Node.js, HTML5, CSS3, Angular, Vue.js
Cloud & DevOps AWS (EC2, S3, Lambda), Azure, Docker, Kubernetes, CI/CD, Git, Jenkins, Infrastructure as Code	Data Analytics & Business Intelligence Power BI, Data Visualization, SQL, API Integration, RMM Tools (NinjaRMM), Workflow Automation
Cybersecurity & Network SIEM (Splunk, QRadar, ELK), Vulnerability Assessment, Penetration Testing, Network Security, Incident Response	AI/ML & Emerging Tech TensorFlow, PyTorch, Machine Learning, Deep Learning, Computer Vision, Natural Language Processing

EDUCATION

PhD in Engineering

Louisiana State University | Concentration: Computer Science | Present

Master of Science in Computer Systems Technology

Louisiana State University of Shreveport | Concentration: Computer Science | May 2025

Master of Science in Computer Systems Technology

Louisiana State University of Shreveport | Concentration: Cybersecurity & Networking | May 2025

Bachelor of Science in Computer Science

Louisiana State University of Shreveport | Concentration: Cybersecurity & Networking | Dec 2024

PROFESSIONAL EXPERIENCE & KEY PROJECTS

Small Business Consulting Corporation (SBCC)

Data Engineer II & Team Lead

June 2026 – Present

Data Engineer I

April 2026 – June 2026

Support enterprise data engineering operations leveraging Palantir Foundry expertise across client consulting engagements. Utilize InVision for collaborative prototyping and Maven Smart System for intelligent pipeline orchestration within the Foundry ecosystem. Develop Python, TypeScript, and SQL solutions for data ingestion, transformation, and API integration supporting Foundry pipeline operations and ontology development. Contribute to Workshop application builds that translate raw client data into actionable business intelligence aligned with client operational objectives.

Pipeline Engineer / Systems Analyst

HiTech Computers (Managed Service Provider) | Ruston, Louisiana

August 2025 - Present

Optimize MSP workflows and data pipelines for enterprise IT service delivery, supporting multi-client infrastructure management

Developed automated Python script integrating NinjaRMM API to analyze device lifecycle across 500+ endpoints, generating comprehensive age and specification reports for proactive hardware replacement planning

Architected Power BI dashboards providing real-time visibility into ticket metrics, SLA compliance, and technician performance across service portfolio

Redesigned ticket workflow processes resulting in 30% improvement in first-response times and enhanced service engineer productivity

Created data integration solutions connecting disparate systems (PSA, RMM, documentation platforms) to establish single source of truth for operational metrics

Foundry Builder - Applied Notional Project

Palantir Technologies | Certification Project

2024

Completed comprehensive hands-on project as part of Palantir Foundry & AIP Builder Foundations certification

Developed end-to-end data pipeline solution demonstrating proficiency in ontology modeling, data transformation, and application development

Utilized Pipeline Builder, Code Repositories, and Workshop to create functional analytical application demonstrating mastery of Foundry core concepts

Software Engineer - AirStorm-GFS Weather Prediction System

U.S. Air Force Global Strike Command Contract | airstorm.com

August 2024 - May 2025

Architected enterprise-level weather prediction solution utilizing Google's GraphCast AI model for mission-critical military operations

Implemented scalable cloud infrastructure on AWS with Docker containerization, achieving 99.9% uptime for real-time forecasting

Integrated Open-Meteo API for GEOTIFF/GeoJSON data processing, enabling precision weather modeling and visualization

Established CI/CD pipeline using GitHub and ClickUp integration, reducing deployment time by 60%

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Palantir Foundry & AIP Builder Foundations - Completed comprehensive certification covering ontology design, data integration, Pipeline Builder, Workshop, and AIP capabilities

Foundry Data Engineer (In Progress) - Advanced certification track focused on production data engineering and complex ontology design

Advanced coursework in Object-Oriented Programming, Network Security, Algorithm Analysis, and Systems Architecture

Hands-on experience with penetration testing tools: Zenmap, Nessus, OpenVAS, Hashcat

ADDITIONAL QUALIFICATIONS

Security Clearance: (Pending)

Programming Paradigms: Object-Oriented, Functional, and Systems Programming expertise

Project Management: Agile/Scrum methodologies, cross-functional team leadership

Industry Knowledge: Defense Technology, Government Contracting, Managed Services, Real Estate Technology, AI/ML Applications

Soft Skills: Problem-solving, analytical thinking, team collaboration, technical communication, stakeholder management
